-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 October 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 15-45 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 15-45 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This action is responsive to communications: Amendment, filed on 10/09/05.

This action is final.

Claims 15-45 are pending in this application. Claims 15, 16, 25, 29, 30 and 39 are independent claims. In the Amendment, filed on 10/09/05, and claims 40-45 were added.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15, 29, 39, 40, 43, and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deluca et al., International Publication No. WO 97/19429 in view of Mochizuki US Patent 6,044,248.

As per claim 15, Deluca teaches a method for handling messages transmitted between communication terminals via a wireless network comprising:

generating a compound message including a text part and at least one graphical icon part, (see page 5, lines 13-14; Examiner interprets the image generated by the text #07 to be an icon)

the compound message generation including reading a user inputted text part (see page 5, lines 13-21; Examiner interprets "#07Tom?" to be a compound message) and

converting the inputted text part into a predefined message text format, (see page 10, lines 15-22; Examiner interprets the house address and the telephone number to be predefined text messages because they are automatically generated based on upon user selection)

transmitting of the message via the wireless network (see page 3, lines 2-15; Examiner interprets radio communication network to be a wireless network).

However, Deluca fails to teach adding graphical part to the message, the graphical part including a record for each of the at least one graphical icon part in a graphical format;

and adding position information in the message defining a position of the at least one graphical icon part in the text part.

Mochizuki teaches adding graphical part to the message, the graphical part including a record for each of the at least one graphical icon part in a graphical format; (column 4, lines 63-column 5, lines 8)

and adding position information in the message defining a position of the at least one graphical icon part in the text part (column 5, lines 6-20)

It would have been obvious to an artisan at the time of the invention to include Mochizuki's teaching with method of Deluca in order to allow users to send customized formatted message.

As per claims 29 and 39, they are rejected with the same rationale as claim 1. (see rejection above)

As per claim 40, which is dependent on claim 15, Deluca and Mochizuki teach method of claim 15. Mochizuki further teaches wherein the position information further defines the position of the at least one graphical icon part relative to the text part such that at least a portion of the text is positioned prior to the at least one graphical icon part and at least another portion of the text part is positioned following the at least one graphical icon part. (see Mochizuki, figure. 9 (a-d), column 5, lines 6-20)

Art Unit: 2174

As per claim 43, which is dependent on claim 29, it is of the same scope as claim 40.

Supra.

As per claim 45, which is dependent on claim 39, it is of the same scope as claim 40.

Supra.

Claims 16, 19-25, 30, 33-38, 41, 42, and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sugio et al. US 6,032,025 in view of Mochizuki US 6,044,248.

As per claim 16, Sugio teaches a communication terminal for handling messages and comprising:

- a controller,

- a transceiver for communicating with a wireless communication network, and

- a user interface through which the user operates the terminal, the user interface including a display (see Sugio, column 2, lines 30-50),

- message editor application allowing the user to generate a compound message including a text part and at least one graphical icon part; (see Sugio, column 2, lines 30-42 and column 7, lines 29-60) and

- wherein the controller generates the compound message for being transmitted via the transceiver (see Sugio, column 2, lines 34-36) including

- a text part in a predefined message text character format (see Sugio, column 7, lines 41-42),

- a graphical part including a record for each of the at least one graphical icon part in a graphical format (see Sugio figure 5, col. 6, lines 60-col7, lines 10).

However, Sugio fails to teach information in the message defining a position of the at least one graphical icon part in the text part.

Mochizuki teaches information in the message defining a position of the at least one graphical Icon part in the text part. (see Mochizuki, column 5, lines 6-20)

It would have been obvious to one of ordinary skill in the art at the time of invention to incorporate the method of Mochizuki with the method of Sugio in order to allow more user control over used screen space.

As per claim 19, Sugio and Mochizuki teach a communication terminal according to claim 16. Sugio further teaches wherein the message editor application allows the user to copy a pre-stored graphical Icon from a memory associated with the controller and containing a plurality of clip art graphical icons. (see Sugio, column 6, lines 27-42 and column 7, lines 48-52)

As per claim 20, Sugio and Mochizuki teach a communication terminal according to claim 16. Sugio further teaches the communication terminal comprising a message reader application for automatically converting a received compound message into a displayable format based on the text part and the at least one graphical icon part. (see Sugio, column 9, lines 7-22).

As per claim 21, Sugio and Mochizuki teach a communication terminal according to claim 19. Sugio further teaches the method wherein the message reader application includes means for allowing the user to store the at least one graphical part in the memory associated with the controller and containing a plurality of graphical icons. (see Sugio, column 6, lines 27-34)

As per claim 22, Sugio and Mochizuki teach a communication terminal according to claim 16. Sugio further teaches wherein the message editor application allows the user to

Art Unit: 2174

manually generate a graphical icon on the display by selectively marking dots in an icon matrix.

(see Sugio, column 17, lines 36-43)

As per claim 23, Sugio and Mochizuki teach a communication terminal according to claim 22. Sugio teaches wherein the message editor application allows the user to store a manually entered graphical icon in the memory associated with the controller and containing a plurality of graphical icons. (see Sugio, column 18, lines 29-35)

As per claim 24, Sugio and Mochizuki teach a communication terminal claim 16. Sugio further teaches wherein the message editor application allows the user to input a plurality of graphical parts in the graphical part of the message and information in the message to display the plurality of graphical parts as an animation sequence. (see Sugio, column 42, lines 19-22)

As per claim 25, it is rejected with the same rationale as claim 16. Supra

As per claim 30, it is rejected with the same rationale as claim 16. Supra

As per claim 33, which is dependant on claim 30, it is of the same scope as claim 19.

Supra.

As per claim 34, which is dependant on claim 30, it is of the same scope as claim 20.

Supra.

As per claim 35, which is dependent on claim 30, it is of the same scope as claim 21.

Supra.

As per claim 36, which is dependent on claim 30, it is of the same scope as claim 22.

Supra.

As per claim 37, which is dependent on claim 30, it is of the same scope as claim 23.

Supra.

Art Unit: 2174

As per claim 38, which is dependent on claim 30, it is of the same scope as claim 24.

Supra

As per claim 41, which is dependent on claim 16, Sugio and Mochizuki teach a communication terminal claim 16. Mochizuki further teaches wherein the position information further defines the position of the at least one graphical icon part relative to the text part such that at least a portion of the text is position prior to the at least one graphical icon part and at least another portion of the text part is position following the at least one graphical icon part. (see Mochizuki, figure. 9 (a-d), column 5, lines 6-20)

As per claim 42, which is dependent on claim 25, it is of the same scope as claim 41.

Supra.

As per claim 44, which is dependent on claim 30, it is of the same scope as claim 41.

Supra.

Claims 17, 18, 26, 27, 28, 31, and 32 rejected under 35 U.S.C. 103(a) as being unpatentable over Sugio et al. US 6,032,025 in view of Mochizuki US 6,044,248 further in view of Medina US 6,047,828.

As per claim 17, Sugio and Mochizuki teach a communication terminal according to claim 16. However, Sugio and Mochizuki do not teach wherein the message generated by the controller includes the position information. Medina teaches wherein a message includes a header part including position information of graphics. (see Medina, column 3, lines 34-66) It would have been obvious to one of ordinary skill in the art at the time of the invention to

Art Unit: 2174

incorporate the method of Sugio and Mochizuki with the method Medina in order to allow image data and text data to be properly reconstructed into their proper special relationships

As per claim 18, Sugio, Mochizuki and Medina teach a communication terminal according to claim 17. Medina teaches wherein the header part of the message furthermore includes information about graphics size. (see Medina, column 3, lines 34-66)

As per claim 26, Sugio, Mochizuki and Medina teach a communication terminal according to claim 17. Sugio teaches wherein the message editor application allows the user to copy a pre-stored graphical icon from a memory associated with the controller and containing a plurality of clip art graphical icons. (see Sugio, column 6, lines 27-42 and column 7, lines 48-52)

As per claim 27, Sugio, Mochizuki and Medina teach a communication terminal according to claim 18. Sugio teaches wherein the message editor application allows the user to copy a pre-stored graphical icon from a memory associated with the controller and containing a plurality of clip art graphical icons. (see Sugio, column 6, lines 27-42 and column 7, lines 48-52)

As per claim 28, which is dependent on claim 17, it is of the same scope as claim 18.

Supra

As per claim 31, which is dependent on claim 30, it is of the same scope as claim 17.

Supra

As per claim 32, which is dependent on claim 31, it is of the same scope as claim 18.

Supra

Response to Argument

Applicant's arguments with respect to claims 15-45 have been considered but are deemed to be moot in view of the new grounds of rejection.

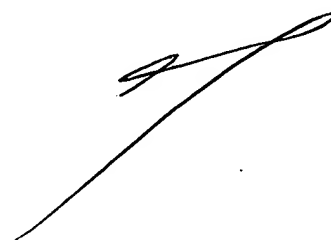

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peng Ke whose telephone number is (571) 272-4062. The examiner can normally be reached on M-Th and Alternate Fridays 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kristine L. Kincaid can be reached on (571) 272-4063. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
